Org-Mode Reference Card (1/2)

(for version 4.33)

Getting Started

(add-to-list 'auto-mode-alist '("\\.org\$" . org-mode)) (define-key global-map "\C-cl" 'org-store-link)¹ (define-key global-map "\C-ca" 'org-agenda)¹

For the many customization options try M-x org-customize To read the on-line documentation try M-x org-info

Visibility Cycling

rotate current subtree between states	TAB
rotate entire buffer between states	S-TAB
show the whole file	C-c C-a

Motion

next heading	C-c C-n
previous heading	С-с С-р
next heading, same level	C-c C-f
previous heading, same level	C-c C-b
backward to higher level heading	C-c C-u
jump to another place in document	C-c C-j
previous/next plain list item	$s-up/down^3$

Structure Editing

insert new heading/item at current level insert new TODO entry	M-RET M-S-RET
promote current heading up one level	M-LEFT
demote current heading down one level	M-RIGHT
promote current subtree up one level	M-S-LEFT
demote current subtree down one level	M-S-RIGHT
move subtree/list item up	M-S-UP
move subtree/list item down	M-S-DOWN
kill subtree	C-c C-x C-w
copy subtree	C-c C-x M-w
yank subtree	C-c C-x C-y
archive subtree To set archive location for current file, add a #+ARCHIVE: archfile::* Archived Tasks	C-c \$ line like ² :

Filtering and Sparse Trees

show sparse tree for all matches of a regexp	C-c /
view TODO's in sparse tree	C-c C-v
global TODO list in agenda mode	C-c t 1
create sparse tree with all deadlines due	C-c C-w
time sorted view of current org file	C-c C-r

Tags

set tags for current heading	C-c C-c
realign tags in all headings	С-и С-с С-с
create sparse tree with matching tags	C-c \
globally (agenda) match tags at cursor	C-c C-o

TODO Items

rotate the state of the current item	C-c C-t
view TODO items in a sparse tree	C-c C-v
view 3rd TODO keyword's sparse tree	C-3 C-c C-v
set the priority of the current item	C-c , [ABC]
remove priority cookie from current item	C-c , SPC
raise priority of current item	S-UP ³
lower priority of current item	S-DOWN ³
<pre>#+SEQ_TODO: TODO TRY BLUFF DONE #+TYP_TODO: Phil home work DONE</pre>	todo workflow todo types
Timestamps	

C-c .
C-u C-c .
C-c !
C-c C-d
C-c C-s
C-c C-w
С-с С-у
S-RIGHT/LEFT 3
S-UP/DOWN ³
C-c >
C-c <
C-c C-o
mouse-1/RET

Links

globally store link to the current location	C-c 1 ¹
insert a link (TAB completes stored links)	C-c C-1
insert file link with file name completion	C-u C-c C-1
edit (also hidden part of) link at point	C-c C-1
open file links in emacs (C-u : in emacs)	C-c C-o
open link at point (3: in emacs)	mouse-2/3
jump back to last followed link(s)	C-c &
Internal Links	
< <my target="">></my>	target
<< <my target="">>></my>	radio target ²

<pre></pre>	radio target
[[*this text]]	find headline
[[this text]]	find target or text in buffe
[[this text][description]]	optional link text

elisp form

optional link text

Tables

Creating a table

just start typing, e.g.	Name Phone Age RET - TAB
convert region to table	C-c
separator at least 3 spaces	C-3 C-c
Commands available inside	tables

The following commands work when the cursor is *inside a table*. Outside of tables, the same keys may have other functionality.

Re-aligning and field motion

re-align the table without moving the cursor C-c C-c re-align the table, move to next field TAB move to previous field S-TAB move the current column left M-LEFT move the current column right M-RIGHT kill the current column in M-S-LEFT insert new column to left of cursor position M-S-RIGHT move the current row up M-UP move the current row or horizontal line M-S-UP insert new row above the current row C-c - insert horizontal line below the current row G-c C-x sort lines in region C-c C-x C-w copy rectangular region C-c C-x C-w paste rectangular region C-c C-x C-y fill paragraph across selected cells C-c C-c C-x re-apply all stored equations to current line C-c * retapply all stored equations to current line C-c * retate calculation mark through $\# * ! ^{-}$ S C-# display column number cursor is in C-c ? sum numbers in current column/rectangle C-c + copy down with increment S-RET ³ Formulas typed in field are executed by TAB, RET and C-c C-c. = introduces a column formula = make current field fully visible C-c intager set 1 % c % cm sum from 3rd hline above to here := v=sum(&III) apply current column formula = export as tab-separated file M-x org-table-export import tab-separated file M-x org-table-export import tab-separated file M-x org-tab	0 0		
move the current column rightM-LEFTmove the current column rightM-RIGHTkill the current column to left of cursor positionM-S-LEFTinsert new column to left of cursor positionM-S-RIGHTmove the current row upM-UPmove the current row downM-DOWNkill the current row or horizontal lineM-S-UPinsert new row above the current rowM-S-DOWNinsert horizontal line below the current rowC-c -sort lines in regionC-c C-xcur rectangular regionC-c C-xcur rectangular regionC-c C-xcur rectangular regionC-c C-xcalculations (in combination with Emacs calc package)set and eval column formulaC-u C-c =ext and eval named-field formulaC-u C-c *re-apply all stored equations to current lineC-c ?rotate calculation mark through $\# *! ^{-}$ C-#display column number cursor is in sum numbers in current column/rectangleC-c +copy down with incrementS-RET ³ Formulas typed in field are executed by TAB, RET and C-c C-c.introduces a column formula=Example: Add Col1 and Col2=\$1+\$2;%.2f with constants from constants.el sum from 3rd hline above to here:=vsum(&III)apply current column formula=MiscellaneousC-u C-u TABto limit column width to N characters, use edit the current field fully visible make current field fully visibleC-u TABexport as tab-separated file mort as tab-separated file mort as ab-separated file	re-align the table, move to next field move to previous field re-align the table, move to next row	or	TAB S-TAB

Org-Mode Reference Card (2/2)

(for version 4.33)

Agenda Views

add/move current file to front of agenda	C-c [
remove current file from your agenda	C-c]
cycle through agenda file list	C-,
compile agenda for the current week compile global TODO list compile TODO list for specific keyword match tags in agenda files agenda for date at cursor show timeline of current org file	$\begin{array}{c} {C-c} & {a} & {a}^1 \\ {C-c} & {a} & {t}^1 \\ {C-c} & {a} & {m}^1 \\ {C-c} & {c-o} \\ {C-c} & {C-o} \\ {C-c} & {C-r} \end{array}$

To set categories, add lines like²: #+CATEGORY: MyCateg

Commands available in an agenda buffer

View Org file

show original location of item also available with show and recenter window goto original location in other window also available with goto original location, delete other windows toggle follow-mode	SPC mouse-3 L TAB mouse-2 RET f
Change display	
delete other windows switch to daily / weekly view toggle inclusion of diary entries toggle time grid for daily schedule toggle display of logbook entries refresh agenda buffer with any changes display the following org-agenda-ndays display the previous org-agenda-ndays goto today	o d / w D g l r RIGHT LEFT
Remote editing	
digit argument change state of current TODO item show tags of current headline set tags for current headline set priority of current item raise/lower priority of current item display weighted priority of current item schedule/set deadline for this item change timestamp to one day earlier/later change timestamp to today insert new entry into diary	0-9 t T s-UP/DOWN ³ P C-c C-s/d S-LEFT/RIGHT ³ > i
Calendar commands	
find agenda cursor date in calendar compute agenda for calendar cursor date show phases of the moon show sunrise/sunset times show holidays convert date to other calendars	с M S H C
Quit and Exit	
quit agenda, remove agenda buffer exit agenda, remove all agenda buffers	q x

Exporting

Exporting creates files with extensions .txt and .html in the current directory.

export as ASCII file export visible text only (e.g. for printing) export as HTML file export as HTML and open in browser prefix arg sets nb. of headline levels, e.g. export as iCalendar file export all agenda files as iCalendar files combine all agenda files to single iCal file insert template of export options	C-c C-x a C-c C-x v C-c C-x h C-c C-x b C-3 C-c C-x h C-c C-x i C-c C-x C-i C-c C-x C-c C-c C-x t
toggle fixed width for entry or region	C-c :
HTML formatting	00.
make words bold make words <i>italic</i> make words <u>underlined</u> sub- and superscripts T _E X-like macros typeset lines in fixed width font tables are exported as HTML tables links become HTML links include html tags	<pre>*bold* /italic/ _underlined_ x^3, J_dust \alpha, \to start with : start with http: etc @@</pre>

Export options

Include additional information for export by putting these anywhere in the org file. Use M-TAB completion to make sure to get the right keywords. M-TAB again just after keyword is complete inserts examples.

1	
the title to be shown the author authors email address language code for html free text description of file which can carry over multiple lines settings for the export process - see below	<pre>#+TITLE: #+AUTHOR: #+EMAIL: #+LANGUAGE: #+TEXT: #+TEXT: #+OPTIONS:</pre>
set number of headline levels for export turn on/off section numbers turn on/off table of contents turn on/off linebreak preservation turn on/off quoted html tags turn on/off fixed width sections turn on/off tables turn on/off TEX syntax for sub/super-scripts turn on/off emphasised text turn on/off TEX macros	H:2 num:t toc:t \n:nil 0:t ::t !:t ^:t *:nil TeX:t

Comments: Text not being exported

Text before the first headline is not considered part of the document and is therefore never exported. Lines starting with # are comments and are not exported. Subtrees whose header starts with COMMENT are never exported.

toggle COMMENT keyword on entry C-c :

Publishing (requires org-publish.el)

publishcurrent file	C-c C-e C-f
publish current project	С-с С-е С-р
publish project (prompted for)	C-c C-e C-c
publish all projects	C-c C-e C-a

Completion

In-buffer completion completes TODO keywords at headline start, TeX macros after "\", option keywords after "#-", TAGS after ":", and dictionary words elsewhere.

Complete word at point

M-TAB

Calendar and Diary Integration

To include entries from the Emacs diary in your Org-mode agenda:

(setq org-agenda-include-diary t)

Remember-mode Integration

See the manual for how to make remember.el use Org-mode links and files. The note-finishing command C-c C-c will first prompt for an org file. In the file, find a location with:

rotate subtree visibility	TAB
next heading	DOWN
previous heading	UP

Insert the note with one of the following:

as sublevel of heading at cursor	RET
right here (cursor not on heading)	RET
before current heading	LEFT
after current heading	RIGHT
shortcut to end of buffer (cursor at buf-start)	RET
Abort	q

CUA and pc-select compatibility

Configure the variable org-CUA-compatibility to make Orgmode avoid the S-<cursor> bindings used by these modes. When set, Org-mode will change the following keybindings (also in the agenda buffer, but not during date selection). See note mark four³ throughout the reference card.

S-UP	\rightarrow	M-p	S-DOW	$N \rightarrow$	M-n
S-LEFT	\rightarrow	M	S-RIG	$HT \rightarrow$	M-+
S-RET	\rightarrow	C-S-RET			

Notes

¹ This is only a suggestion for a binding of this command. Choose you own key as shown under INSTALLATION.

 2 After changing a <code>#+KEYWORD</code> or <code><<<target>>></code> line, press C-c C-c with the cursor still in the line to update.

³ Keybinding affected by org-CUA-compatibility.
